*North Carolina
Reported Pregnancies
1992*

**PUBLICATIONS OF THE
STATE CENTER FOR HEALTH AND ENVIRONMENTAL STATISTICS**

***North Carolina Health Statistics Pocket Guide* (Biennial):**

Data for the U.S., South Atlantic Area, N.C. and N.C. counties are presented in tabular and narrative forms with more than 8,000 calculations depicting patterns of various needs indicators, as well as births, deaths, abortions, diseases, immunizations, health care resources and other data from state and national reporting systems and surveys. This composite of information, contained in a compact foldout, will serve the needs of many, if not most, health data users.

***North Carolina Vital Statistics, Volume 1: Population, Births, Deaths, Marriages, Divorces* (Annual):**

For the state and each Department of Environment, Health, and Natural Resources (DEHNR) region, Perinatal Care Region (PCR), county and major incorporated city, one-page tables summarize annual and 5-year data by race and selected variables. Maps, graphs and narrative describe geographical patterns and statewide trends.

***North Carolina Vital Statistics, Volume 2: Leading Causes of Mortality* (Annual):**

For the state, DEHNR regions, and counties, cause-specific annual and 5-year data are given in the form of numbers of deaths, unadjusted death rates and age-race-sex-adjusted death rates. For each cause, maps depict 5-year adjusted and unadjusted county rates. Infant mortality and multiple conditions data are also tabulated and mapped.

***Basic Automated Birth Yearbook, North Carolina Residents* (Annual):**

Known as the BABY BOOK, this statewide report is comprised of multiple cross-tabulations of various maternal and infant variables such as age, race, birth order, birth weight and number of prenatal visits as well as medical conditions of the mother, the labor/delivery, and the newborn. Data for DEHNR regions and counties are available on microfiche.

***Detailed Mortality Statistics, North Carolina Residents* (Annual):**

This statewide report provides annual counts of deaths specific for detailed underlying cause of death (4 digits) and age-race-sex group. Data for counties are available on microfiche.

***North Carolina Reported Pregnancies* (Annual):**

For the state, DEHNR regions, PCR's, and counties, annual estimates of pregnancy rates, live birth rates, abortion rates and abortion fractions by age and race are followed by one-page tables displaying counts of pregnancies (abortions, live births, and fetal deaths) by race and age for total and unmarried women. Maps, graphs and narrative describe geographical patterns and statewide trends.

***North Carolina Communicable Disease Morbidity Statistics* (Annual):**

For the state, counties and four military bases, one-page tables display disease-specific counts for the current year and four prior years; current counts are race-specific. Tables, graphs and narrative describe statewide trends and age-race-sex patterns in reported cases and rates.

***Cancer Incidence in North Carolina, County-Specific Numbers* (Annual):**

Observed and expected numbers of newly diagnosed cancer cases for 26 cancer sites and all cancers are provided by county and gender. State and county tabulations of cases by race-sex and age are also provided.

***Cancer in North Carolina, Detailed Analyses* (Intermittent):**

This report provides an in-depth assessment of cancer incidence and mortality patterns. Comparisons featured are by anatomic site, stage at diagnosis, age, race, sex and geographic area. Data are in tabular, graphic and narrative forms.

***North Carolina Cancer Facts and Figures* (Annual):**

This collaborative report with the American Cancer Society is prepared specifically for use by the public. It contains tabular, graphic and narrative materials regarding cancer in North Carolina. Information about cancer control activities and agencies in the state is also given.

***Local Health Department Facility and Staffing Report* (Biennial):**

Facility-level data are compiled from health department surveys. Capacity of facilities, staffing levels, and expenditure data are provided.

***CHES Studies* (Intermittent):**

Studies on health topics of current interest are presented in newsletter form.

***CHES Primer* (Intermittent):**

Short tutorials on statistical methods are presented in newsletter form.

***An Inventory of North Carolina Health Data* (Intermittent):**

This publication describes by subject-matter health data sets existing in public and nonpublic agencies. Included in the description are the data set's location, the data collection interval, the smallest unit of analysis, whether computerized, and the name of a contact person.

***North Carolina Inventory of Environmental Data Sets* (Intermittent):**

This publication describes by subject-matter environmental data sets existing in public agencies. Included in the description are the regulations requiring data collection, type of data storage, data collection methodology, geographical coverage, period of data collection, update frequency, availability for public use, and contact information.

***North Carolina Chartbook on Population and Health* (Intermittent):**

This book provides graphs and charts depicting the characteristics of North Carolina's population, health care resources, health care and health status.

INTRODUCTION

This volume is the fourth pregnancy report for North Carolina. The data of this report include reported induced abortions, live births, and fetal deaths. The sum of these events represents total reported pregnancies.

The following section uses tables, graphs, maps, and narrative to examine statewide trends and patterns in pregnancy, live birth, abortion, and fetal death. Subsequent sections of this report examine selected characteristics of abortions, live births, and fetal deaths with emphasis on abortions since they are not elsewhere reported. Finally, for the state, regions, and 100 counties, one-page tables summarize resident abortions, live births, fetal deaths and total pregnancies by race and age for total and unmarried women. These tables, which have been produced, but not published, for many years, are frequently requested. This is the major impetus for publishing the present report, rather than the abortion report published prior to data year 1989.

Users should note a change in the case of newborn's race. For 1989 and prior years, race of child was based on race of mother and race of the father (when known). Beginning in 1990, race of the child is taken to be that of the mother regardless of race of father. This change serves to reduce the number of nonwhite births and fetal deaths and increase the number of white events. Users should be aware of this change when assessing trends before and after 1990. In 1990, the change resulted in 3.5 percent fewer live births and 2.0 percent fewer fetal deaths being coded nonwhite.

Throughout this report, data year 1982 is used as the base to reflect changes during the past decade. Beginning in 1978, abortion providers voluntarily reported detailed characteristics on nearly all of their procedures. Corresponding data for earlier years were obtained from a sample and may not be representative.

Hospitals and clinics in North Carolina reported detailed information on an estimated 98 percent of all abortions performed in 1992. For those facilities not reporting 100 percent, the characteristics data have been expanded in a random manner to agree with each facility's total number of abortions. These adjustments should not seriously bias the results. For live births and fetal deaths, reporting of the events is believed to be virtually 100 percent, although the variables include a few unknown or not stated values.

For the maps of this report, a clustering routine from the Statistical Analysis System (SAS) was used to group counties that are "most like each other" with respect to the statistic being examined. This procedure may result in very large or very small groups, depending on how the counties differ from one another.

It is hoped that this report will serve many of the data needs of those individuals and agencies delivering and/or planning health services for the childbearing population of the state. Users' comments are always welcomed. You may contact this office at (919) 733-4728, or address correspondence to:

TRENDS AND PATTERNS IN PREGNANCY, LIVE BIRTH, ABORTION, AND FETAL DEATH

Total and race-specific measures for each year 1982-1992 are listed in the table below. North Carolina's total resident pregnancy rate has continued a slight upward trend over the past few years with a small decrease from 1991 to 1992. Live births are the greatest contributor to total pregnancies, so it is not surprising that the state's *fertility rate* has followed the same general course as the pregnancy rate, though there was an increase from 1991 to 1992.

The state's abortion rate for 1992 marks the lowest rate for North Carolina in the past decade, due particularly to a decrease among whites from 1991 to 1992. The abortion fraction, which is highly correlated with the abortion rate, likewise shows the lowest rate in 10 years for the state and for whites. Abortion rates and fractions for nonwhites remained stable from 1991 to 1992. The final component of total reported pregnancies is the relatively small number of fetal deaths. In 1992 the fetal death rate for nonwhites showed the highest rate since 1982, increasing 13 percent over 1991 alone.

*Pregnancy and abortions rates for 1981-1983 are not the same as published in some previous abortion estimates. In almost all cases, the updated rates are lower than the rates previously published.

On pages 2-3 through 2-16, maps and tables show county-specific pregnancy, fertility, and abortion rates, as well as abortion fractions for 1992. Fetal death rates are not given due to the instability of the county rates for a single year. Users are referred to the five-year fetal death rates published in *North Carolina Vital Statistics, Volume 1*.

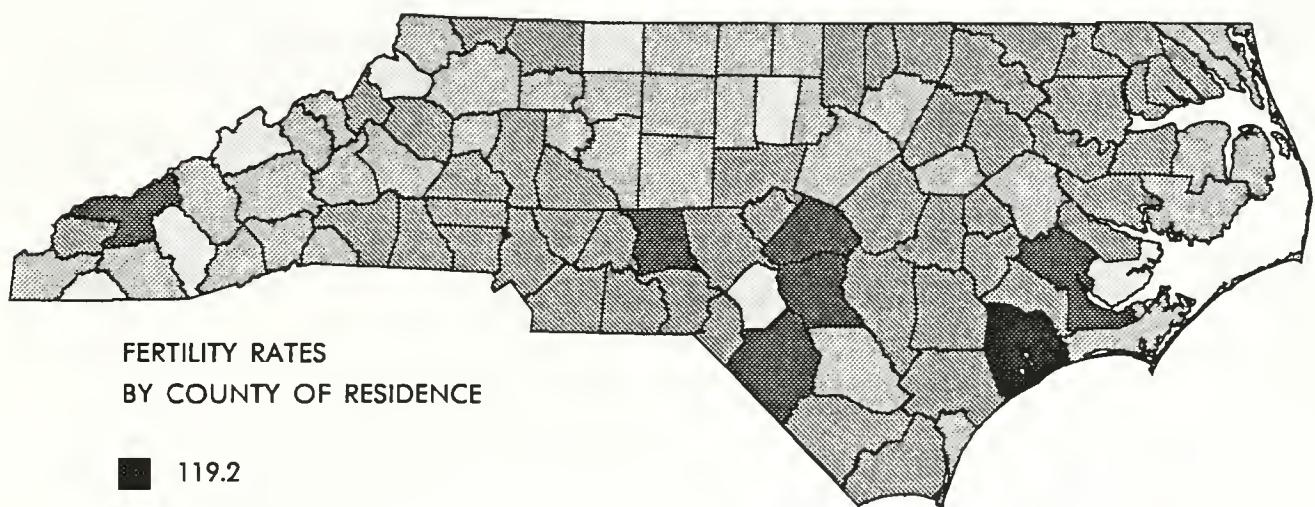

Clustered alone with the highest pregnancy rate is Onslow County; most similar to it are Cumberland, Craven and Hoke counties. These counties also had some of the highest fertility rates. Durham County had the highest abortion rate and Orange County had the highest abortion fraction. Most similar to it are generally the larger, more urban counties.

Special attention should be given to counties with high pregnancy rates among teenagers (ages 15-19). For example, Swain, Edgecombe, Montgomery, Onslow, Halifax, Greene, Hoke, Robeson, Richmond and Northampton counties all had teenage pregnancy rates at least 25 percent higher than the statewide teenage pregnancy rate of 98.3. The county data from teenagers are shown in the tables on pages 2-7 and 2-8.

SUMMARY OF CHARACTERISTICS OF INDUCED ABORTIONS

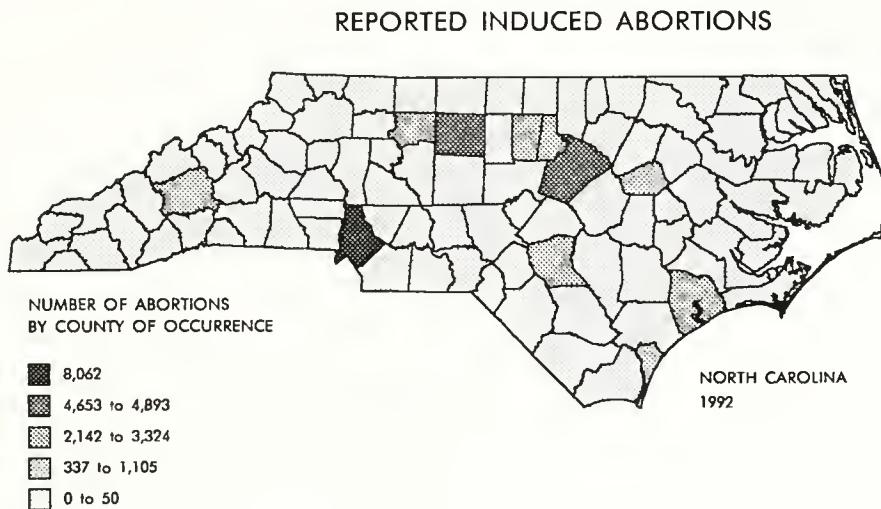

During 1992, the licensed facilities of North Carolina reported 35,253 abortions to the State Center for Health and Environmental Statistics, a decrease of three percent over the number reported in 1991. As in previous years, women obtaining these abortions were most often white, between the ages of 15 and 24, and not married. Most had never had a previous abortion and had no living children. The table on the next page displays these percentages for each year 1982-1992.

Place of Occurrence

The table on page 3-3 details 1992 North Carolina occurrences according to region and county of occurrence. Of the 35,253 abortions reported in North Carolina, 98 percent occurred in 10 counties. Twenty-three percent of the state total occurred in Mecklenburg, 14 percent occurred in Wake, and 13 percent occurred in Guilford.

In 1992, a total of 646 or 2.0 percent of North Carolina resident abortees received abortions in other states. Of these, 39 percent occurred in Georgia, 34 percent occurred in Virginia, and 23 percent occurred in South Carolina. The remaining four percent occurred in Alabama, Kansas, Kentucky, North Dakota, Rhode Island and Tennessee.

The number of 1992 abortions occurring in each North Carolina county is mapped below.

Facility of Occurrence

In 1992, 43 hospitals performed only three percent of abortions occurring in North Carolina. The remaining 97 percent occurred in 36 nonhospital facilities. More than half of the hospital abortions occurred in two hospitals.

The remainder of the data appearing in this publication will be resident data. The base year appearing in the trend graphs is 1982 to reflect changes during the past decade.

Place of Residence

During 1992, a total of 3,169 (9%) of abortions performed in North Carolina were to residents of other states. Of these, 52 percent were residents of South Carolina and 35 percent were residents of Virginia. Tennessee accounted for 7.1 percent of North Carolina's nonresident abortions and Georgia, 1.0 percent. All other states represented less than one percent of the total.

Among abortions to residents of North Carolina, the distribution by county of residence varied widely during 1992 with all 100 counties represented. The most populous counties accounted for the greatest frequencies, as shown below.

Race

Of the 32,730 North Carolina women known to have had abortions during 1992, a total of 18,064 (55%) were white; 12,901 (39%) were black; 235 (1%) were Indian; and 946 (3%) were other races. For the remainder, race of the abortee was unknown. Nonwhite women have higher abortion rates and fractions than white women (see page 2-1).

North Carolina resident induced abortions by race of abortee for 1982 through 1992 are given below.

**Resident Induced Abortions
By Race of Abortee
North Carolina, 1982-1992**

Year	Total	White	Nonwhite
1982	29,890	18,925	10,369
1983	31,892	20,038	11,235
1984	34,138	20,705	12,825
1985	32,478	19,648	12,328
1986	32,849	19,816	12,353
1987	34,344	20,457	13,346
1988	36,066	20,988	14,711
1989	34,907	19,966	14,242
1990	34,565	19,792	13,764
1991	34,369	19,453	14,199
1992	32,730	18,064	14,082

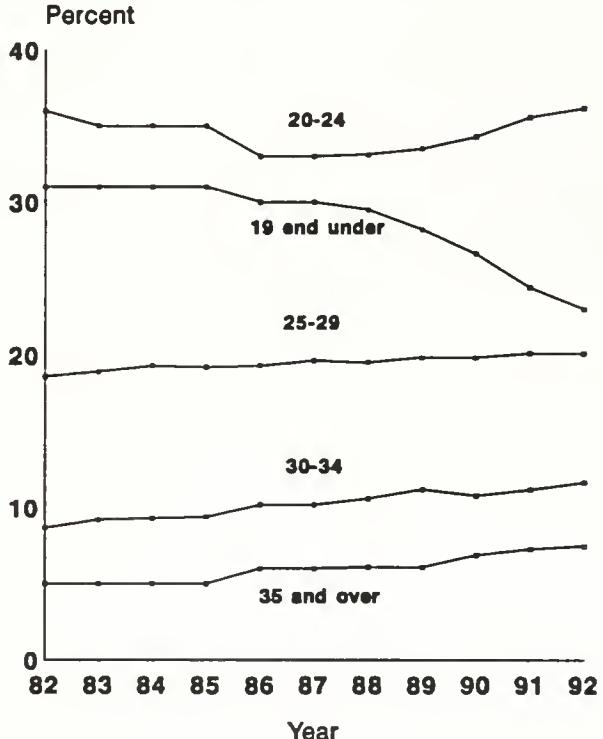

NOTE: Race-specific counts do not add to the total due to cases of unknown race.

**PERCENT INDUCED ABORTIONS BY AGE OF ABORTEE
NORTH CAROLINA, 1982 - 1992**

Age

The average age of North Carolina residents having abortions during 1992 was 24.2 years. The highest percentage of abortions was to women between 20 and 24 years of age. The percentage of abortions at younger ages has declined since 1982.

The table on the following page shows abortion rates and abortion fractions by age of mother for the period 1982-1992. The highest abortion rate occurred to women ages 20-24. The abortion fraction was highest among women ages 15-19.

**ABORTION RATES AND ABORTION FRACTIONS BY AGE
NORTH CAROLINA, 1982-1992**

	Age	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992

**PERCENT INDUCED ABORTIONS
BY EDUCATION OF ABORTEE
NORTH CAROLINA, 1982 - 1992**

Educational Attainment

The average education level of residents receiving abortions during 1992 was 12.6 years. Sixty-five percent had at least 12 years of education, compared to 64 percent during 1982.

Education level has remained a high non-response variable in the reporting of abortions. Twenty-one percent of North Carolina resident abortion reports for 1992 did not specify the education level of the abortee.

Marital Status

Only 22.1 percent of North Carolina residents receiving abortions during 1992 were legally married at the time of the procedure. This compares to 26.5 percent in 1982. Unmarried women (those widowed, divorced or never married) constituted 71.9 percent of North Carolina resident abortees during 1992.

Number of Living Children

In 1992, 49 percent of North Carolina residents who received abortions had no living children. The percentage having three or more living children has increased from 5.6 in 1982 to 6.4 in 1992.

The number of North Carolina women obtaining abortions in 1992 was inversely related to the number of living children. This pattern has prevailed since 1982.

Previous Abortions

The issue of repeat abortion is a matter of concern; 36 percent of North Carolina women having abortions during 1992 reported at least one previous abortion. This compares to 28 percent in 1982.

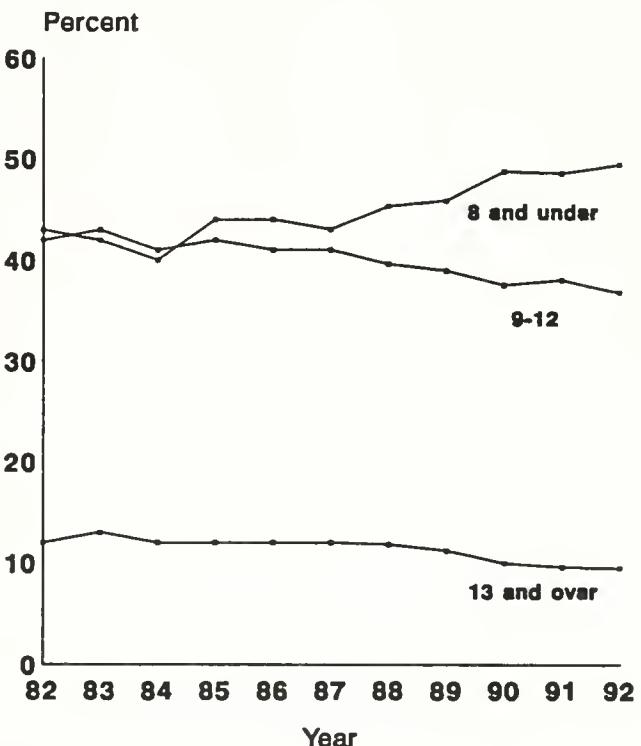

Of the 11,698 women reporting a prior abortion, 71 percent reported one, 21 percent reported two, and eight percent reported three or more.

**PERCENT INDUCED ABORTIONS
BY WEEKS OF GESTATION
NORTH CAROLINA, 1982 - 1992**

Gestation

During 1992, 86 percent of North Carolina resident abortions were performed within the first 12 weeks of gestation. Eight percent of women obtained abortions in the 13-16 week interval, two percent obtained later abortions, and the remaining four percent had unknown gestational age. In 1982, 85 percent of women obtained abortions within 12 weeks of gestation.

In 1992, the percentage of women obtaining abortions beyond the 20th week of gestation was 0.4. The average gestational weeks of pregnancy was 8.9 in 1992.

Complications

Abortion providers report relatively few complications associated with abortion. Compared to 0.7 percent in 1982, only 0.3 percent of resident abortions during 1992 involved reported complications. The most frequently reported condition was "retained products."

Terminating Procedures

Suction curettage accounted for 95.3 percent of all resident abortion procedures reported for 1992. This was followed by other procedures not specified (0.9%), prostaglandin injection (0.7%), saline injection (0.3%) and sharp curettage (0.2%). Hysterotomy and hysterectomy each accounted for less than 0.01 percent of total abortion procedures.

SELECTED CHARACTERISTICS OF RESIDENT LIVE BIRTHS AND FETAL DEATHS

LIVE BIRTHS

The upward trend in the state's fertility rates amounts to an increase in absolute numbers of 21 percent since 1982 to 103,925 resident live births in 1992. Here we examine several live birth trends that cause particular public health concern because of possible economic, emotional, and health consequences to the mother/child. Several other publications available from this office offer more detail about live births and their maternal and medical characteristics. Region, county, and some city data are also available.

Race

The table below shows the absolute numbers of live births by race. The white number rose 22 percent, while the nonwhite number rose 20 percent between 1982 and 1992.

**Resident Live Births by Race of Child
North Carolina, 1982-1992**

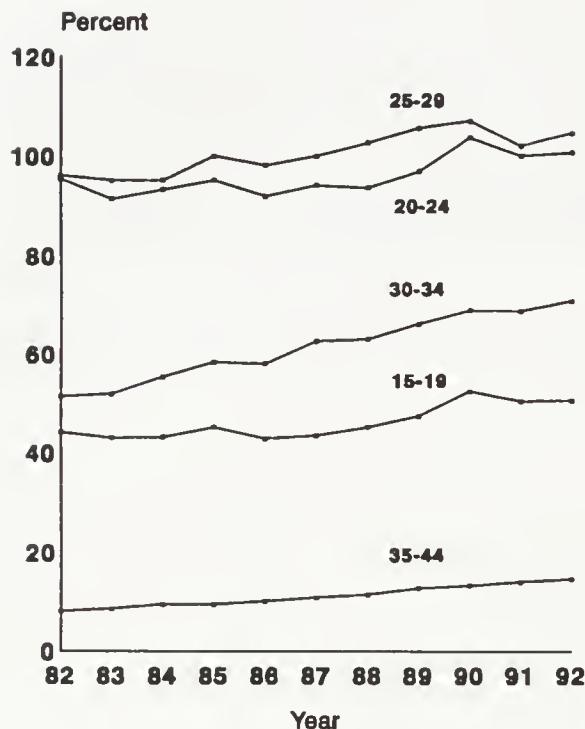

YEAR	TOTAL	WHITE	NONWHITE
1982	85,908	58,149	27,759
1983	83,854	57,446	26,408
1984	85,986	59,399	26,587
1985	89,391	61,766	27,625
1986	90,228	61,746	28,482
1987	93,481	63,876	29,605
1988	97,560	65,937	31,623
1989	102,091	68,455	33,636
1990	104,439	71,095	33,344
1991	102,309	69,233	33,076
1992	103,925	70,687	33,238

Maternal Age

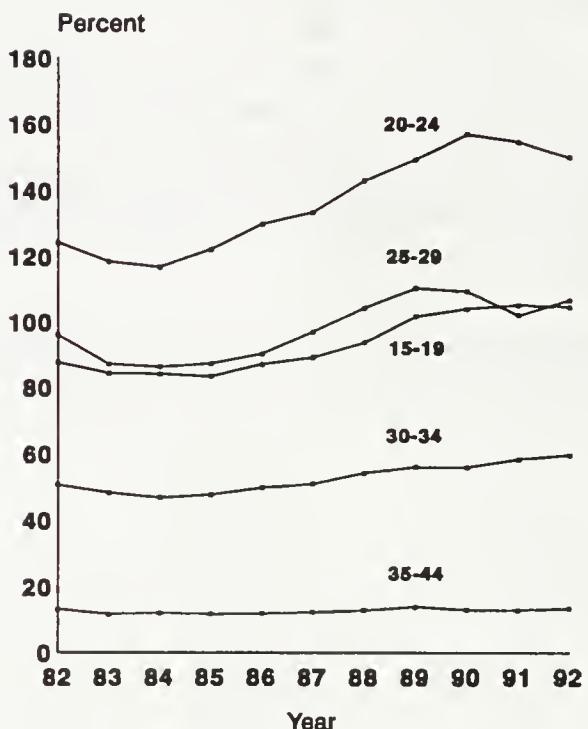

The graphs on the next page show trends in age-specific white and nonwhite fertility rates. A slight increase was observed at all ages for whites from 1991 to 1992. Nonwhites showed decreases for 15-19 and 20-24 age groups, while fertility rates for other nonwhites increased.

Of particular concern are the rising rates among younger and older mothers, among whom health consequences to mother and her child are often more frequent and severe. Fetal death rates of older mothers are shown in the table on page 4-4.

WHITE FERTILITY RATES BY AGE
NORTH CAROLINA, 1982 - 1992

NONWHITE FERTILITY RATES BY AGE
NORTH CAROLINA, 1982 - 1992

Unmarried Mothers

High divorce rates and the widespread tendency to delay marriage to older ages have both contributed to growth in the unmarried female population. In addition, the fertility rate of unmarried women has increased. Together, these factors have resulted in a steady rise in the percentage of live births occurring out of wedlock.

Beginning at 20.2 in 1982, the percentage of North Carolina live births to unmarried mothers reached 31.3 in 1992. By race, the white percentage more than doubled, from 7.1 to 16.1, while the nonwhite percentage rose by 33 percent, from 47.8 to 63.7.

Birthweight

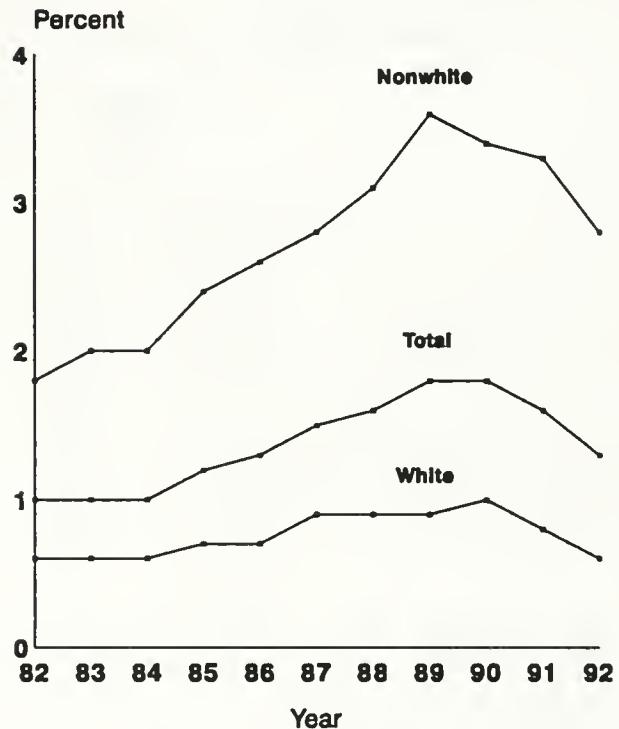

Low birthweight (5 pounds, 8 ounces or less) is the single greatest contributor to infant mortality and morbidity. Thus, it is a matter of urgent concern that North Carolina's low-birthweight rate of 8.4 percent in 1992 was no better than that observed over the past decade. North Carolina's rate is also among the highest in the nation.

Very low-weight births (3 pounds, 4 ounces or less) also showed a steady rate in the past few years. The percent of newborns at these weights has remained around 1.5 over the 1982-1992 period.

PERCENT LIVE BIRTHS WITH NO PRENATAL CARE
BY RACE
NORTH CAROLINA, 1982 - 1992

No Prenatal Care

Although still representing a relatively small fraction of all live births, the increasing percentage of births to mothers who had no prenatal care is a major concern. As shown in the graph, that percentage has risen sharply since 1984 to almost twice its level. Starting in 1989, percentages began a downward trend. The decline has continued from 1991 to 1992 with percentages falling from 0.8 to 0.6 percent for whites and 3.3 to 2.8 percent for nonwhites.

FETAL DEATHS

As shown in the table on page 4-4, both whites and nonwhites experienced some reduction in fetal mortality over the 1982-1992 period. However, the state's overall rate remains one of the highest in the nation.

This section examines trends in white and nonwhite fetal death by race and maternal age. Race-specific fetal death rates for regions, counties, and cities are available in North Carolina Vital Statistics, Volume 1. Counties are urged to use 5-year fetal death rates, rather than the less stable single-year rates.

Race

Since 1982, fetal mortality (fetal deaths per 1,000 deliveries) has decreased by 21 percent in whites, while there was a 6.8 percent increase for nonwhites from 1982 to 1992. As shown in the table below, the number of fetal deaths has increased by 28.6 percent for nonwhites from 1982 to 1992. For the same period, the number of white fetal deaths is 4.3 percent lower.

**Resident Fetal Deaths by Race
North Carolina, 1982-1992**

YEAR	TOTAL	WHITE	NONWHITE
1982	863	492	371
1983	818	449	369
1984	766	461	305
1985	775	445	330
1986	800	440	360
1987	814	477	337
1988	872	443	429
1989	899	455	444
1990	911	463	448
1991	884	465	419
1992	948	471	477

Maternal Age

Because of the instability of the fetal death rates by race and age, they are not graphed here. However, the table below serves to point up the higher rates among mothers 35 and older as well as the age-race-specific declines since 1982. By 1992, the rate for whites 35 and older had dropped 56 percent since 1982 to the lowest rate in a decade. However, the rate for older nonwhites has not decreased significantly since 1982.

**Fetal Death Rates by Age and Race
North Carolina, 1982-1992**

AGE and RACE	Year										
	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992

Meconium, moderate/heavy Premature rupture of membrane (> 12 hours) Abruptio placenta Placenta previa Other excessive bleeding Seizures during labor Precipitous labor (< 3 hours) Prolonged labor (> 20 hours) Dysfunctional labor Breech/Malpresentation Cephalopelvic disproportion Cord prolapse Anesthetic complications Fatal distress None Other (Specify)	
38b. OTHER HISTORY FOR THIS PREGNANCY (Complete all items)		41. METHOD OF DELIVERY (Check all that apply)	
Tobacco use during pregnancy Yes <input type="checkbox"/> No <input type="checkbox"/> Average number cigarettes per day _____		Vaginal Vaginal birth after previous C-section Primary C-section Repeat C-section Forceps Vacuum	
Alcohol use during pregnancy Yes <input type="checkbox"/> No <input type="checkbox"/> Average number of drinks per week _____		42. CONDITIONS OF THE NEWBORN (Check all that apply)	
Weight gained during pregnancy ____ lbs		Anemia (Hct < 39/Hgb < 13) Birth injury Fetal alcohol syndrome Hyaline membrane disease/RDS Meconium aspiration syndrome Assisted ventilation < 30 min Assisted ventilation ≥ 30 min Seizures None Other (Specify)	
39. OBSTETRIC PROCEDURES (Check all that apply)		Down's syndrome Other chromosomal anomalies (Specify) None Other (Specify)	
Amniocentesis Electronic fetal monitoring Induction of labor Stimulation of labor Tocolysis Ultrasound None Other (Specify)		20. _____ 21. _____ 22. _____	

APPENDIX C

NORTH CAROLINA DEPARTMENT OF ENVIRONMENT, HEALTH, AND NATURAL RESOURCES
DIVISION OF EPIDEMIOLOGY — VITAL RECORDS SECTION

REPORT OF FETAL DEATH

Registration District No.	Local No.							
FETUS	NAME OF FETUS	FIRST	MIDDLE	LAST	SEX OF FETUS	DATE OF DELIVERY	TIME OF DELIVERY	
	1.				2.	3.	4.	M
	NAME OF FACILITY (If not institution, give street and number)				CITY, TOWN, OR LOCATION		COUNTY OF DELIVERY	
	5a.				5b.		5c.	
	MOTHER'S NAME (First, Middle, Last)				MAIDEN SURNAME		DATE OF BIRTH (Month, Day, Year)	
	6a.				6b.		7.	
	PARENTS RESIDENCE STATE		COUNTY		CITY, TOWN, OR LOCATION		STREET AND NUMBER	
	8a.		8b.		8c.		8d.	
	INSIDE CITY LIMITS (Yes or No)		ZIP CODE		FATHER'S NAME (First, Middle, Last)		DATE OF BIRTH (Month, Day, Year)	
	8a.		8b.		8c.		10.	
PART I. FETAL DEATH WAS CAUSED BY:								
(a) IMMEDIATE CAUSE								
Fatal or maternal condition directly causing fetal death								
(b) DUE TO, OR AS A CONSEQUENCE OF								
Fetal and/or maternal conditions, if any, giving risk to the immediate cause (a), stating the underlying cause last.								
(c) DUE TO, OR AS A CONSEQUENCE OF								
Part II. OTHER SIGNIFICANT CONDITIONS of fetus or mother which may have contributed to fetal death but not resulting in the underlying cause given in Part I.								
12a.				PHYSICIAN'S ESTIMATE OF GESTATION (Weeks)	Fetus died before labor, during labor or delivery, unknown (Specify)	AUTOPSY (Specify Yes or No)		
12b.				12c.	12d.	13.		
I certify that this delivery occurred on the date shown and that the fetus was born dead. SIGNATURE: 14.				ATTENDANT M.D., Nurse-Midwife, Midwife, other (Specify) 15a.	DATE SIGNED 15b.			
MAILING ADDRESS 15c.				SIGNATURE OF MEDICAL EXAMINER (If delivery not attended by physician) 18.				
DATE RECEIVED BY LOCAL REGISTRAR 17a.		SIGNATURE OF REGISTRAR 17b.						

INFORMATION FOR STATISTICAL USE ONLY

OF HISPANIC ORIGIN? (Specify Yes or No. If yes, specify Cuban, Mexican, White, Black, etc.) 18. Puerto Rican, etc., below)		RACE — American Indian, White, Black, etc. 18. (Specify below)	20. EDUCATION (Specify only highest grade completed) Elem./Sec. (0-12) College (1-4 or 5+)	21. OCCUPATION AND BUSINESS/INDUSTRY (Worked during last year) Occupation	Business/Industry

APPENDIX D

DEFINITIONS

Abortee	A woman who has received an abortion.
Abortion Fraction	The number of induced abortions per 1,000 reported pregnancies (live births + fetal deaths of 20 or more weeks gestation + induced abortions).
Abortion Rate	The number of induced abortions per 1,000 females of specified age.
Age	Age at last birthday.
Age-standardized Abortion Rate	The abortion rate calculated by applying the state's rate within 5-year age groups to the July 1980 N.C. female population in those same age groups. A rate is standardized to control for differences in age distribution over time or between population groups.
Clinic	A freestanding facility, neither physically attached to nor operated by a licensed hospital, for the performance of abortions.
Education	The number of years of schooling completed.
Fertility Rate	The number of live births per 1,000 females of specified age.
Fetal Death	Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, as indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles (definition adopted by World Health Organization in 1950).
Gestation	Weeks of pregnancy as computed from date of last menstrual period.
Gestational Age	The age of the fetus in weeks.
Hysterectomy	A surgical procedure in which the uterus is removed either with the fetus inside or after the fetus is removed.
Hysterotomy	A surgical procedure which removes a fetus that is too small to survive even with extraordinary life support measures.
Induced Abortion	The purposeful interruption of pregnancy with the intention other than to produce a live born infant or to remove a dead fetus and which does not result in a live birth.
Live Birth	The complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or any definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached (definition adopted by World Health Organization in 1950).

<i>Living Children</i>	The number of children still living at the time of this event.
<i>Maternal</i>	Of or pertaining to the mother.
<i>Married</i>	Includes women living with a husband and those who are separated but not legally divorced. In the case of live births and fetal deaths, the term also includes mothers who have been legally divorced 280 or fewer days.
<i>Not Married</i>	Includes women who are widowed or divorced and those who have never married. In the case of live births and fetal deaths, widowed or divorced includes only mothers who have been widowed or legally divorced for more than 280 days.
<i>Occurrence</i>	The facility, county, region, or state in which the event occurred.
<i>Perinatal</i>	Occurring at about the time of birth.
<i>Pregnancy Rate</i>	The number of pregnancies per 1,000 females of specified age.
<i>Prenatal</i>	Occurring, existing, or taking place before birth.
<i>Previous Abortions</i>	The number of previous induced abortions the abortee has had. The current procedure is not included.
<i>Prostaglandin Injection</i>	A procedure which involves injecting a prostaglandin (a substance with hormone-like activity) into the uterine cavity through a needle inserted through the abdominal wall.
<i>Race</i>	Two broad categories, "white" and "nonwhite," are used. "Nonwhite" is predominantly Black (>90%) in North Carolina.
<i>Residence</i>	The usual county, region, or state of residence of the pregnant woman.
<i>Retained Products</i>	Fetal tissue that may remain in the uterus after an abortion.
<i>Saline Injection</i>	A procedure which entails withdrawing a portion of the amniotic fluid from the uterine cavity by a needle inserted through the abdominal wall and replacing this fluid with a concentrated salt solution.
<i>Sharp Curettage</i>	A procedure which involves the dilation of the cervix as in suction, although usually to a larger diameter. The fetal and placental tissues are then scraped out with a curette, which resembles a small spoon.
<i>Suction Curettage</i>	In this procedure the cervical canal is dilated by the successive insertion of instruments of increasing diameter. When the opening is large enough, a flexible tube is inserted into the uterine cavity and the fetal and placental tissues are then suctioned out by an electric vacuum pump.
